

Tom's Pest Control

ServiceM8 add-on

Ready for daily use

USER GUIDE

SMS Dashboard

How it works, and how to get the most from it

The add-on is live inside ServiceM8. Automatic job texts, manual Send SMS, inbox, and delivery log all run through your Yeastar TG400. It has been tested by our team and by yours.

Status

Built, installed, tested, and working. You can use it in day-to-day work from ServiceM8. No extra login and no office PC left on — just keep the office router and Yeastar powered.

What's in this guide

1. What you have now
2. How a message gets sent
3. Where to open it in ServiceM8
4. Send SMS from a job
5. Automation (hands-free texts)
6. Templates & personalisation
7. Inbox, log & analytics
8. Settings
9. Using it at full potential
10. If a message doesn't send

1. What you have now

Staff stay in ServiceM8. The add-on sends and receives SMS using your own SIM numbers on the Yeastar gateway.

Automatic SMS

When a job is created, a tech goes en route, or a job is completed, the customer can be texted automatically.

Send SMS on a job

Open any job, pick a recipient and template, preview, and send — without leaving ServiceM8.

Inbox

Customer replies appear in a conversation view, matched to the job by mobile number.

Log & notes

Every outbound SMS is logged. A note is also written on the ServiceM8 job so the team can see what was sent.

2. How a message gets sent

1. Something happens on a job in ServiceM8 — or staff tap **Send SMS**.
2. The add-on loads the full job and customer (not just the webhook pointer).
3. It picks the right template, fills in name / job number / address, and finds the mobile.
4. The message is sent through your **Yeastar TG400** at the office.
5. If the customer replies, it shows in **Inbox**. If they have no mobile, nothing is sent.

ServiceM8 → cloud app → office router → **Yeastar TG400** → customer's phone

3. Where to open it in ServiceM8

What you want	Where to go
Manage automations, templates, inbox, log	Add-ons → SMS Dashboard
Text someone about a specific job	Open the job → Send SMS action

If the dashboard looks blank or Send SMS can't load job details, go to **SMS Dashboard → Settings → Reconnect OAuth** once, then try again.

Overview — 7-day send count, gateway status, and the other tabs along the top

4. Send SMS from a job

Use this for one-off messages: “we’re 10 minutes away”, a gate-code request, a reschedule, a quote nudge. Automation cannot cover every situation — this is how you stay personal.

- 1 Open the job in ServiceM8.
- 2 Choose the **Send SMS** action.
- 3 Pick who to text (job contact or other mobiles on the job/company).
- 4 Pick a template, or choose *Custom message* and type your own.
- 5 Check the **Preview** — this is exactly what the customer will receive.
- 6 Tap **Send SMS**.

Send SMS

Job	Status
J-1042	En Route
Customer	Address
Jane Smith	12 Oak St, Brisbane

Recipient

Jane Smith — 0412 345 678

Template

Technician en route

Message

Hi Jane, our technician is en route to 12 Oak St for job J-1042. ETA ~20 mins. Reply STOP to opt out.

1 SMS segment 118 / 160

PREVIEW

Hi Jane, our technician is en route to 12 Oak St for job J-1042. ETA ~20 mins. Reply STOP to opt out.

Cancel Send SMS

Job Send SMS — recipient, template, live preview, then send

No mobile listed?

Add a mobile on the job contact or company contact in ServiceM8, then open Send SMS again. The add-on will not guess a number.

The composer also shows recent messages for that job, so you don’t repeat yourself. Aim for one SMS segment (about 160 characters) when you can — longer messages still send, they just use more segments.

5. Automation — texts that send themselves

Open **SMS Dashboard** → **Automation**. Each rule answers three questions: *when*, *what to say*, and *who gets it*.

Settings

Automation rules

Choose when to send SMS and which template to use.

+ Add rule

Rule name	When	Status match	Template	On
Booking confirmed	Job created	—	booking_confirmed	Yes
Technician on the way	Technician en route	En Route, Dispatched	en_route	Yes
Job completed thank you	Job completed	Completed	job_complete	Yes
Quote follow-up	Status changed	Quote	quote_followup	Yes

When: Job created · Status changed · En route · Job completed

Save rules

Automation — map job events to a template. Turn a rule off if you don't want that text.

When a rule can fire

When	Typical use	Watch-out
Job created	Booking received / we'll be in touch	Fires once when the job is first created
Status changed	Quote sent, work order, cancelled	If you leave "Status becomes" blank, it can fire on <i>every</i> status change. Set a specific status, or turn this rule off.
Technician en route	Tech is on the way	Only fires if the job status matches Settings (default: En Route, Dispatched). Labels must match ServiceM8.
Job completed	Thank-you / job done	Fires when status becomes Completed

Who receives it

- **Customer (job contact)** — usual choice for job updates.
- **Company primary contact** — useful when the site contact and the billing contact are different.
- **This number** — a fixed mobile (office, manager, after-hours). Good for internal alerts, not customer texts.

After you add or edit rules, tap **Save automations**. A disabled rule never sends.

Avoid double texts

Don't run a catch-all "Status changed" rule *and* a "Job completed" rule for the same moment — the customer can get two messages. Keep one rule per situation.

6. Templates & personalisation

There are two template lists. They look similar; they are used in different places.

Where you write it	Used by	Placeholder style
Internal templates (Templates tab)	Automation rules	{{customerName}} {{jobNumber}} {{address}} {{status}}
ServiceM8 templates (same tab, or ServiceM8 itself)	Send SMS on a job	{job.contact_first} {job.generated_job_id} {job.job_address} {vendor.name}

Click the chips above the message box to insert fields. Always check the live preview — empty job fields are left blank rather than showing the tag.

Starter wording (edit to your voice)

Situation	Example
New job	Hi {{customerName}}, we received job {{jobNumber}}. We'll be in touch soon. — Tom's Pest Control
En route	Hi {{customerName}}, our technician is on the way to {{address}} for job {{jobNumber}}.
Completed	Hi {{customerName}}, job {{jobNumber}} is complete. Thanks for choosing Tom's Pest Control.

Write like a text, not a letter

Name + what happens next + who it's from. Skip long disclaimers. Keep it one segment when you can.

7. Inbox, log & analytics

Inbox

Open **Inbox**. Numbers are on the left; tap one to see the full thread. Replies are matched by mobile number. Refresh if you just received a text.

Inbox — pick a number, read the conversation, see the matched job

Make this a habit: check Inbox at the start of the day and after lunch. Gate codes, “we’re not home”, and reschedule requests land here — not in email.

Log

Every outbound SMS is listed with time, number, status, and a short body preview. If a customer says they never got a text, start here. Status **sent** means the gateway accepted it. **failed** means it did not go out — the Detail column usually says why.

Analytics

A simple 7-day outbound count plus how many inbound messages are stored. Use it to see whether volume looks normal, not as a full report pack.

8. Settings

Setting	What it does
En-route status labels	Comma-separated ServiceM8 statuses that mean “tech is on the way” (default: <code>En Route,Dispatched</code>). Must match your job status names exactly.
Test Yeastar	Confirms the cloud app can still reach the office gateway. Use this if sends suddenly stop.
Reconnect OAuth	Re-authorises ServiceM8. Use if the dashboard or Send SMS can’t load jobs/templates.

9. Using it at full potential

The add-on is already working. These are the habits that make it earn its keep.

1. Decide your four texts — then stop

Most pest-control jobs only need: booking received, quote follow-up (if you quote), tech on the way, job done. Turn off everything else so customers are not spammed.

2. Put mobiles on every contact

Automation and Send SMS both need a mobile on the job or company. No number = silent skip. Make this part of booking, not an afterthought.

3. Match your real ServiceM8 statuses

If your board says “On Route” but Settings still say “En Route”, the en-route text will never send. Copy the label from ServiceM8.

4. Use Send SMS for the human bits

Automation covers the standard journey. Staff should still send a quick text for access issues, “running late”, or “please confirm tomorrow”.

5. Treat Inbox like a phone

A reply sitting unread is a customer waiting. Assign someone to watch Inbox during office hours.

6. Keep wording short and yours

Use your company name, not a generic sender. Preview every new template once with a real job before you rely on it.

Suggested setup for Tom's Pest Control

Rule	On?	Send to
New job — we received your booking	Yes	Job contact
Status = Quote — follow up / quote is ready	Only if you quote by SMS	Job contact
En route — technician on the way	Yes (highest value text)	Job contact
Completed — thank you	Yes	Job contact
Catch-all “any status change”	Off	—

Office reminder

The cloud app runs 24/7. SMS still needs the **office router and Yeastar TG400 powered on** with SIMs in. You do not need a PC left on.

10. If a message doesn't send

What you see	What to try
Send SMS says no mobile	Add a mobile on the job or company contact, then reopen Send SMS.
Send SMS says no templates	Settings → Reconnect OAuth, then add a ServiceM8 template from the Templates tab.

What you see	What to try
Automation didn't fire	Is the rule on and saved? Does the status label match? Does the contact have a mobile? Check the Log.
Customer didn't receive it	Check Log status. If it says sent, the number or handset is the next place to look. If failed, use Detail and Test Yeastar.
No replies in Inbox	Customer must text the same number the SMS came from. Refresh Inbox. Confirm the Yeastar is on.
Dashboard blank	Hard-refresh the add-on iframe, then Reconnect OAuth.

If Test Yeastar fails, the office internet, port-forward, or Yeastar itself needs a look — the ServiceM8 side is usually fine.

Quick staff cheat-sheet

Every job Confirm a mobile is on the contact before the job goes to the field.	Office hours Check Inbox twice a day. Reply from the job with Send SMS when needed.	End of week Skim the Log. If volume dropped to zero, Test Yeastar and check the gateway is on.
